

Below is a GAP ANALYSIS table evaluating the system/software requirements definition process base practices against the given engineering claims.

Base Practice ID	Title	Status	Evidence Rationale
SSRDP_BP1	Identify Stakeholder Needs	PARTIAL EVIDENCE	While EC-003 highlights documentation gaps, EC-005 claims evidence of documentation practices, suggesting partial stakeholder engagement may have occurred for versioning needs.
SSRDP_BP2	Define and Document Requirements	NO EVIDENCE IDENTIFIED	EC-003 suggests gaps in documentation, especially relating to deployment and security, indicating a lack of comprehensive requirements definition and documentation.
SSRDP_BP3	Analyze and Prioritize Requirements	PARTIAL EVIDENCE	Some prioritization likely occurred, as suggested by EC-001 highlighting intended architectural components in the design, but overall evidence is not fully convincing.
SSRDP_BP4	Resolve Requirement Conflicts	NO EVIDENCE IDENTIFIED	No specific claims suggest mechanisms to identify or resolve requirement conflicts; evidence is lacking in this area.
SSRDP_BP5	Manage Requirement Changes	PARTIAL EVIDENCE	EC-005 suggests some structured version control, yet evidence detailing a comprehensive requirement change process is not identified.

In conclusion, while there is partial evidence of stakeholder engagement and some elements of version control, there are notable gaps especially in requirement definition, documentation, and conflict resolution.
