

Evidence-Gap Assessment: Technical Software System Design

Base Practice	Status	Rationale
Prepare for software system design definition.	EvidenceStatus.STRONG_EVIDENCE	The inclusion of the claim CLM-007, which references historical consideration of the COBRA Toolbox approach, suggests strong historical reflection and preparedness aligning with defining design strategies and principles.
Establish designs related to each software system element.	EvidenceStatus.STRONG_EVIDENCE	Claim CLM-009's reference to GitHub history comments provides robust evidence of active examination of design alternatives and the presence of a structured transformation of architecture into system elements.
Assess alternatives for obtaining software system elements.	EvidenceStatus.PARTIAL_EVIDENCE	The claims indicate the exploration of alternatives (OptArrow's development approach and GitHub history) but do not provide explicit assessment against design criteria or selection of preferred alternatives.
Manage the design.	EvidenceStatus.PARTIAL_EVIDENCE	While historical consideration and exploration of alternatives exist, the claims lack specifics on the capture and traceability of design, indicating only partial implementation of comprehensive design management principles.
