

Evidence-Gap Assessment: Architecture Definition Assessment

Base Practice	Status	Rationale
Prepare for architecture definition.	EvidenceStatus.STRONG_EVIDENCE	The claim about using Apache Arrow, supported by evidence indicating a strategic selection process, aligns with the practice directives to create a roadmap and define evaluation criteria, showing thorough preparation.
Develop architecture viewpoints.	EvidenceStatus.PARTIAL_EVIDENCE	There's some alignment with the practice of developing viewpoints since they selected a specific framework, but a lack of documented trials suggests not all practice requirements were completed.
Develop models and views of candidate architectures.	EvidenceStatus.PARTIAL_EVIDENCE	While the claim shows intention to model using Apache Arrow, the absence of alternatives testing highlights a potential gap in addressing the breadth required by the practice.
Relate the architecture to design.	EvidenceStatus.NO_EVIDENCE_IDENTIFIED	The claims do not directly provide evidence of creating a relationship between the architecture and design as outlined in this practice.
Assess architecture candidates.	EvidenceStatus.PARTIAL_EVIDENCE	While a preferred architecture was chosen, the lack of trial alternatives indicates gaps in comprehensively assessing against requirements or constraints, partially fulfilling this practice's requirements.
Manage the selected architecture.	EvidenceStatus.NO_EVIDENCE_IDENTIFIED	Claims do not provide evidence of management actions such as governance or maintaining architecture completeness required by this practice.
