

Evidence-Gap Assessment: Claims Assessment Against Base Practices

Base Practice	Status	Rationale
Prepare for system/software requirements definition	EvidenceStatus.NO_EVIDENCE_IDENTIFIED	There is no identified connection between the claim regarding 'Alternative Architectural Histories' and the base practice of preparing for system/software requirements definition. The claim does not involve defining functional boundaries or obtaining enabling systems/services.
Define system/software requirements	EvidenceStatus.NO_EVIDENCE_IDENTIFIED	The claim lacks any supporting evidence relevant to the requirements definition for a software system. While it discusses historical architectural approaches, it does not involve defining necessary functions, states, or attributes of a software system.
Analyse system/software requirements	EvidenceStatus.NO_EVIDENCE_IDENTIFIED	The practice focuses on analyzing requirements for performance and stakeholder review, which is not addressed in the claim. Historical context in architectural approaches does not relate directly to requirement analyses or addressing deficiencies.
Manage system/software requirements	EvidenceStatus.NO_EVIDENCE_IDENTIFIED	There is no evidence provided in the claim that relates to managing system/software requirements, such as maintaining traceability or stakeholder agreements. The claim's focus on historical architectural approaches and repository data does not reflect managing current requirement processes.
